Undergraduate Students and Advisors!

The 2015 Society of Toxicology Annual Meeting offers a great opportunity for undergraduate students interested in learning more about toxicology! Students can:

**Hear about current science!**
- **Special sessions on Sunday just for undergraduates will** cover topics in toxicology as well as information on graduate school, internships, and more.
- Undergraduates, graduate students, and postdoctoral scholars are invited to participate in the special *In Vitro Toxicology Lecture and Luncheon for Students* on Monday.
- Undergraduates are also **welcome at all regular scientific sessions during the week**. Learn more about hot scientific topics such as: environmental exposures and Alzheimer's disease, the toxicology of nanomaterials, the impacts of wildfires on human health, the future of carcinogenicity testing, and much more.

**Meet and talk to toxicologists from academics, government, and industry!**
There are both formal and informal opportunities to talk with toxicologists (as well as graduate and other undergraduate students) about their careers and their scientific work.
- The **Student/Postdoctoral Scholar Mixer** on Sunday is an opportunity for undergraduate students, graduate students, and postdoctoral scholars to meet in an informal atmosphere at the beginning of the meeting.
- All undergraduates are encouraged to attend the informal **Undergraduate Student Meeting** to talk about shared interests related to toxicology.

**Participate in other entertaining and educational events!**
- The **Tox ShowDown** on Tuesday is a quiz game in which three teams of contestants compete to answer questions concerning toxicology. All meeting attendees are welcome!
- **Other activities specifically for undergraduates** (a scavenger hunt/bingo game, for example) are in the planning stages.

The **Annual Meeting Registration fee is waived** for undergraduates, and undergraduate students can also become **Student Affiliates** of SOT for no cost.
