Medical Device Specialty Section

The MDSS is a new SOT specialty section launched in September 2009 whose purpose is to provide an international forum where government, industry, consulting, and academic toxicologists can share state-of-the-art knowledge and develop new approaches for the evaluation of medical devices. The objectives for the MDSS are:

1. Promote the development of new experimental methods for the evaluation of medical devices;
2. Promote the development of new device components; and
3. Sponsor scientific and educational programs that emphasize current developments and issues in the toxicological evaluation of medical devices.
