

# SPATIAL INVESTIGATION OF STRESS AND INFLAMMATION IN THE HEALTHY AND SUSCEPTIBLE LUNG

Alessandro Venosa, PharmD, PhD

Assistant Professor  
Department of Pharmacology and Toxicology  
Skaggs College of Pharmacy  
University of Utah

September 18<sup>th</sup>, 2023

# LAB FOCUS: SUSCEPTIBILITY TO STRESS

- \* Lung epithelial dysfunction (mutations)
- \* Preexistent conditions (fibrosis) – NIEHS ONES Award

Aging

# PULMONARY FIBROSIS (PF)

- ✓ Rare and aggressive degenerative disease
- ✓ >200,000 Americans currently living with IPF
- ✓ >50,000 new diagnoses and an estimated 40,000 deaths → x2 since 2010
- ✓ Several challenges to advance approach to the disease
  - Disease of aging (66 years mean diagnosis)
  - Short patient survival (3-5 years from diagnosis)
  - Heterogeneity

<https://doi.org/10.3389/fmed.2021.736485>

# HALLMARKS OF CANCER..AGING..FIBROSIS

Impaired wound repair capacity and epithelial-mesenchymal crosstalk + abnormal proliferation (bronchiolization)

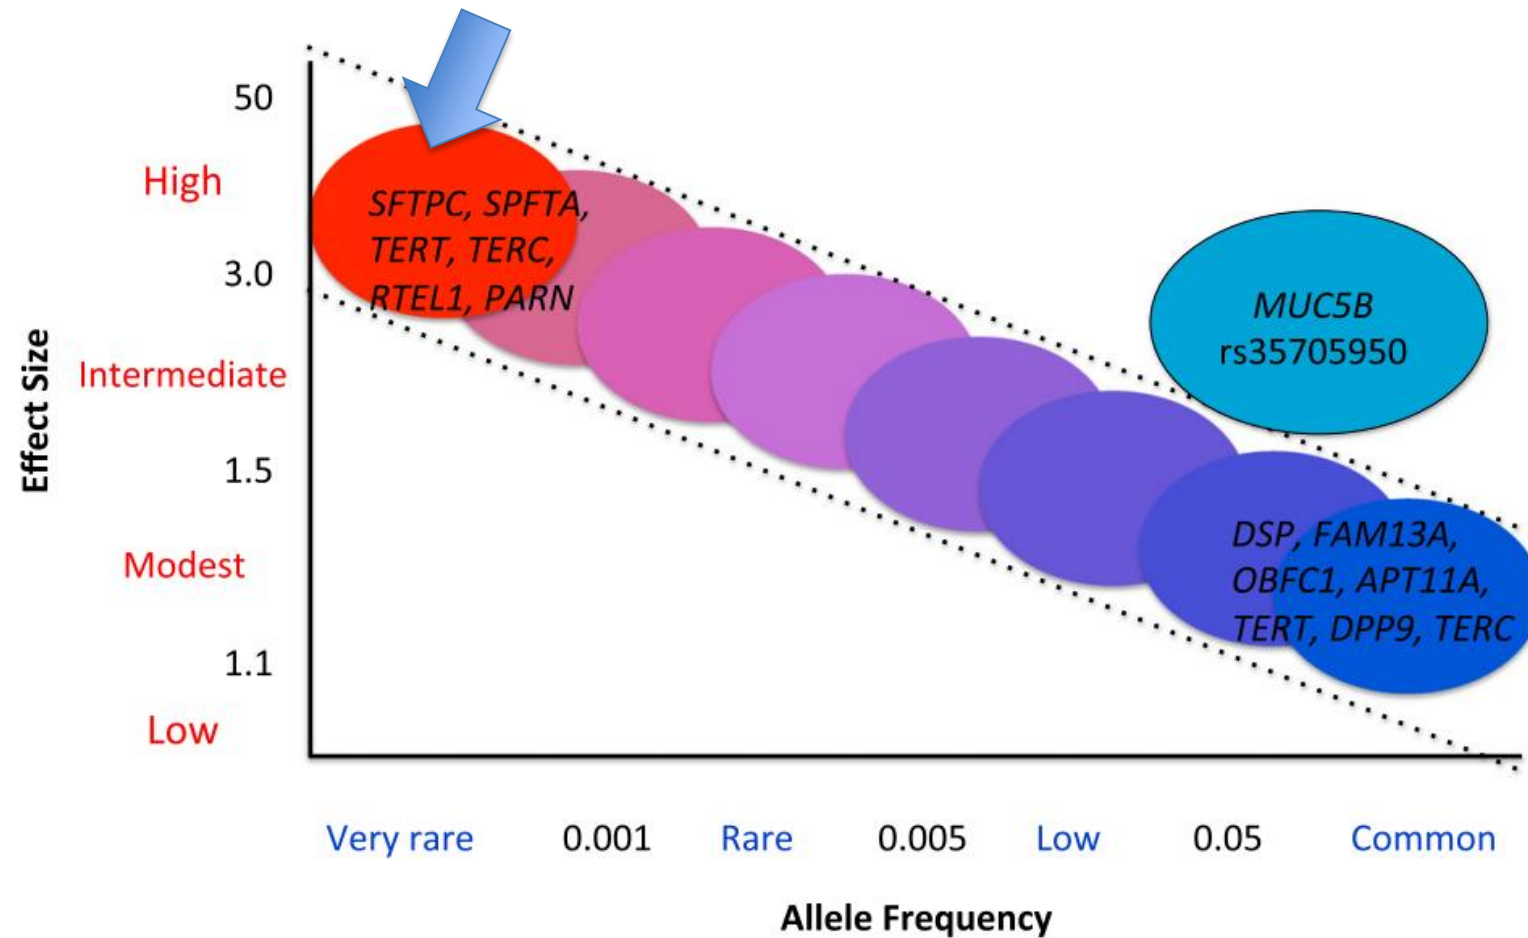

Heterogenous milieu from stressed parenchyma and activated immune cells

Unique matrix within the scarred/remodeled tissue (regional differences?)

DOI: 10.1183/09031936.00186914

# PARENCHYMAL MUTATIONS AND PULMONARY FIBROSIS

Epithelial-initiated injury

# DEVELOPING A VIABLE SP-C MUTANT LINE – THE HYPOMORPH LINE

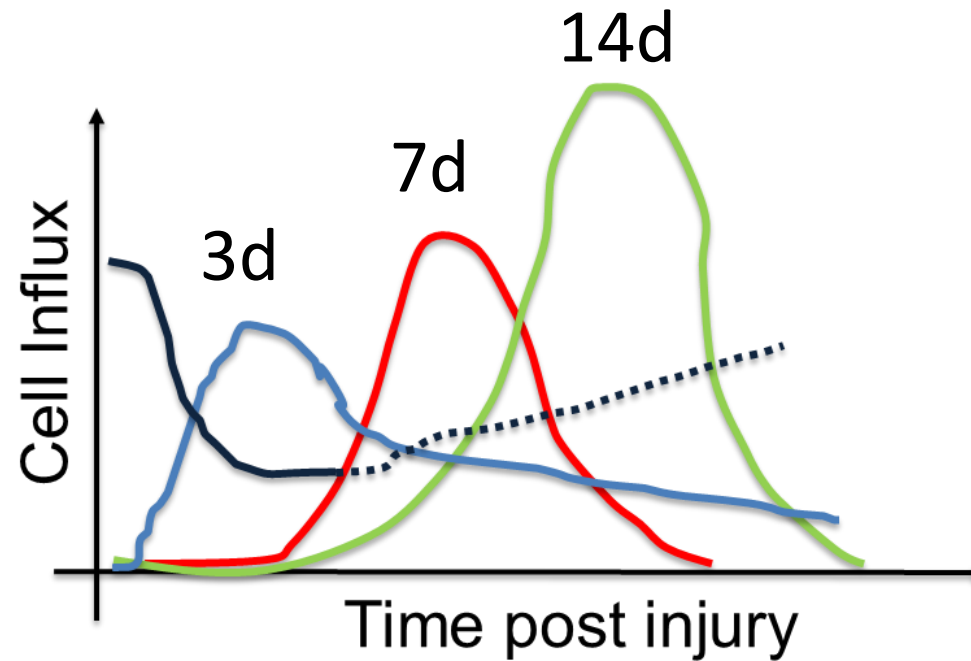

**No overt lung phenotype**

# SP-C<sup>I73T</sup>: A VIABLE MODEL OF REMODELING

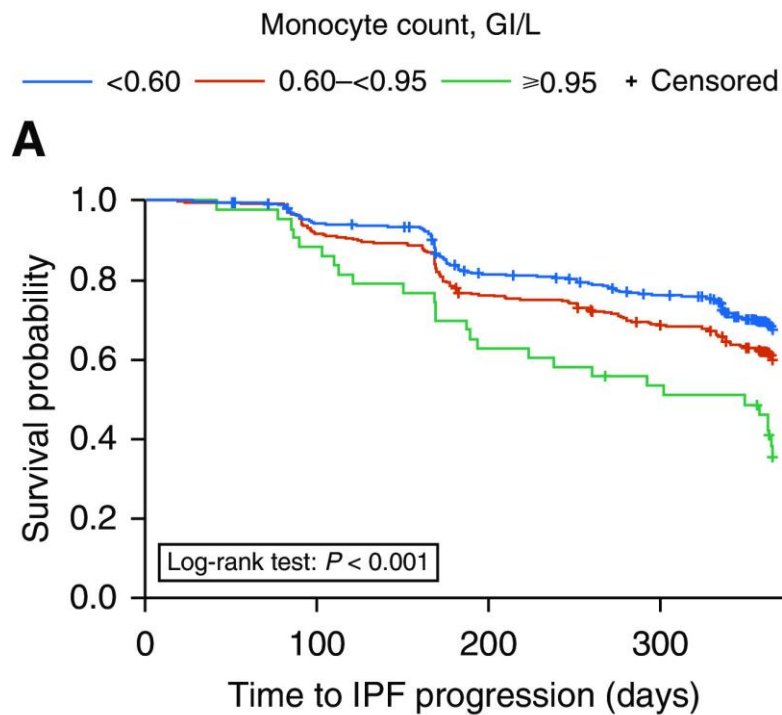

# INFLAMMATORY CELL RECRUITMENT AT THE PEAK OF SP-C<sup>I73T</sup> INDUCED FIBROSIS

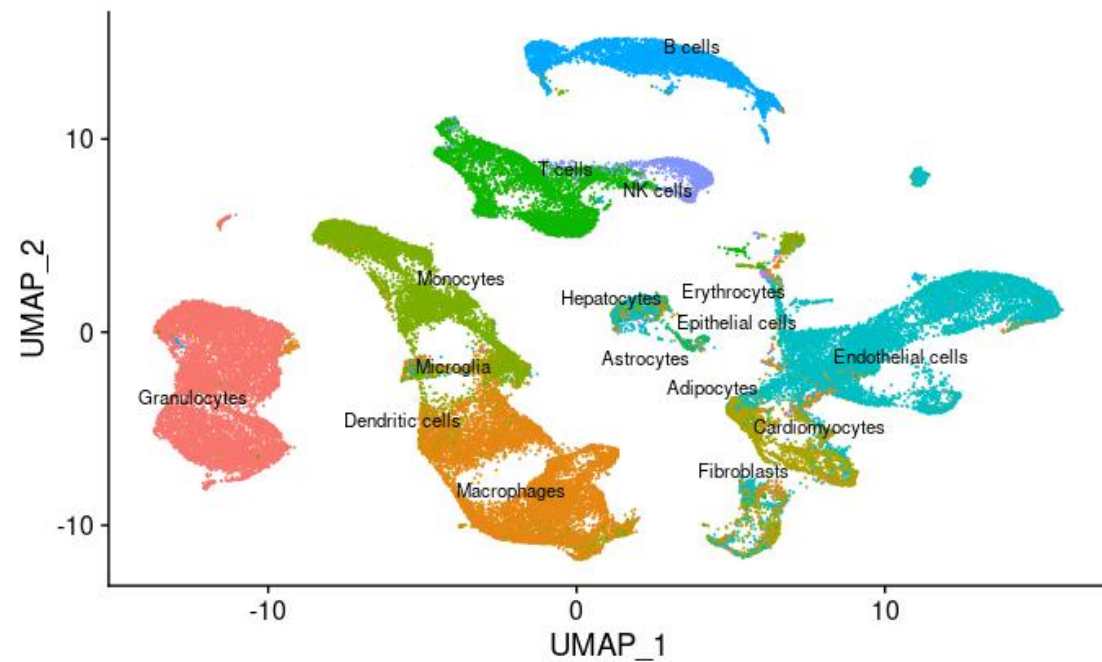

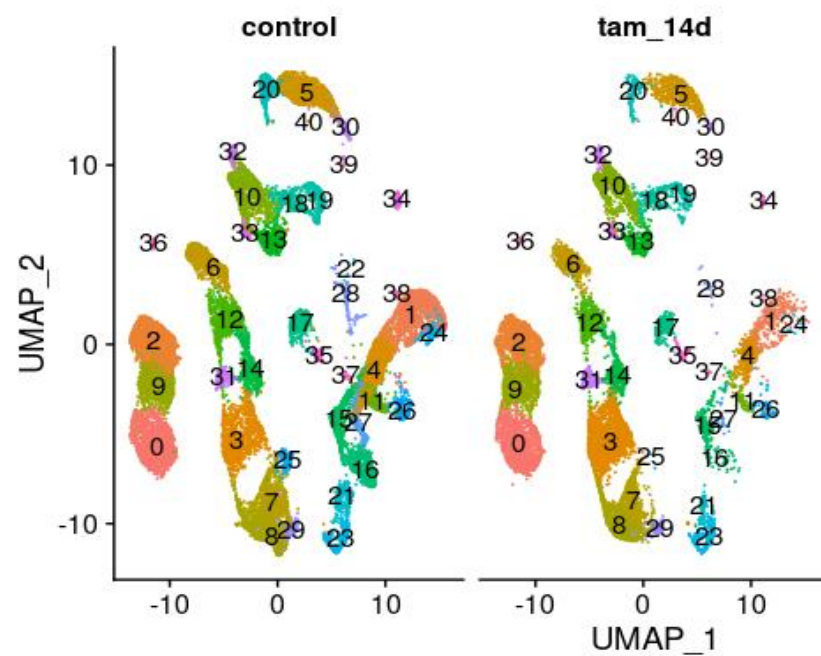

Dark Blue - Alv Macs  
Dotted line – mono derived macs  
Light blue – Mono  
Red – Neu  
Green - Eos

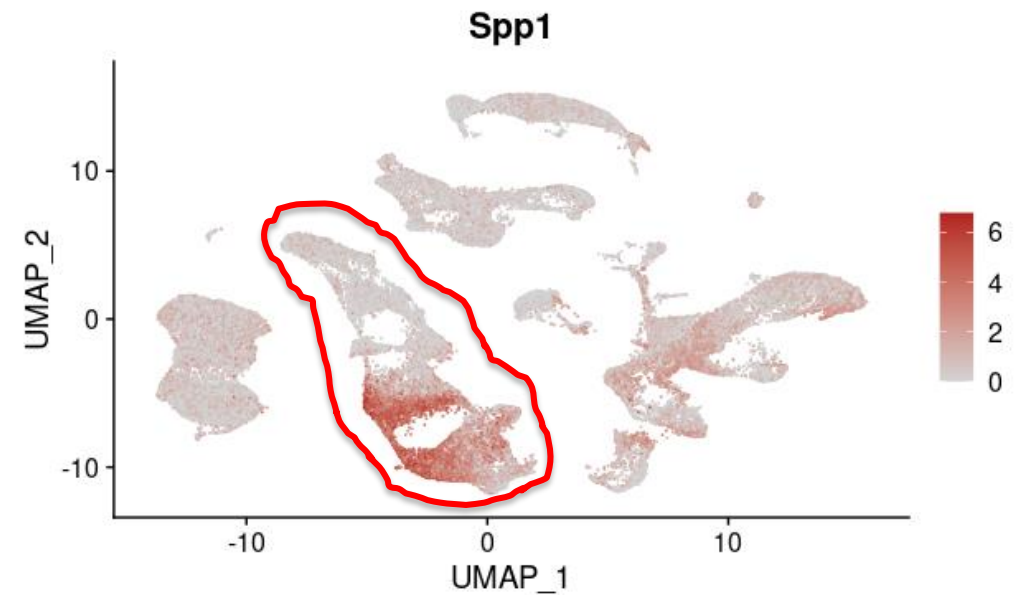

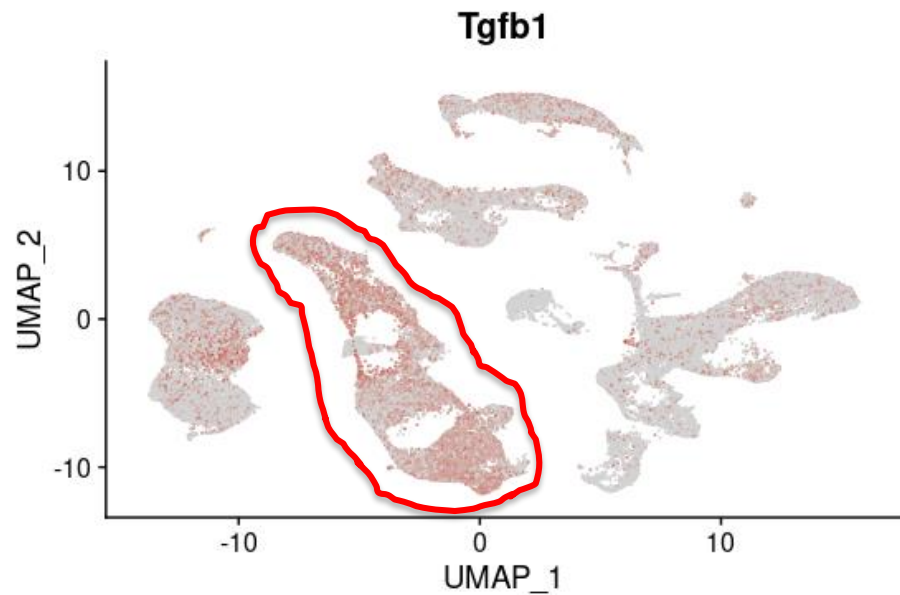

# INFLAMMATORY MONOCYTES AND PF OUTCOME

# LUNG CELL BREAKDOWN DURING SP-C<sup>I73T</sup> INDUCED INJURY

# LUNG CELL BREAKDOWN DURING SP-C<sup>I73T</sup> INDUCED INJURY

Unpublished data

# LUNG CELL BREAKDOWN DURING SP-C<sup>I73T</sup> INDUCED INJURY

# HOW CAN WE TEASE OUT THE ROLE OF EACH INDIVIDUAL MACROPHAGE POPULATION?

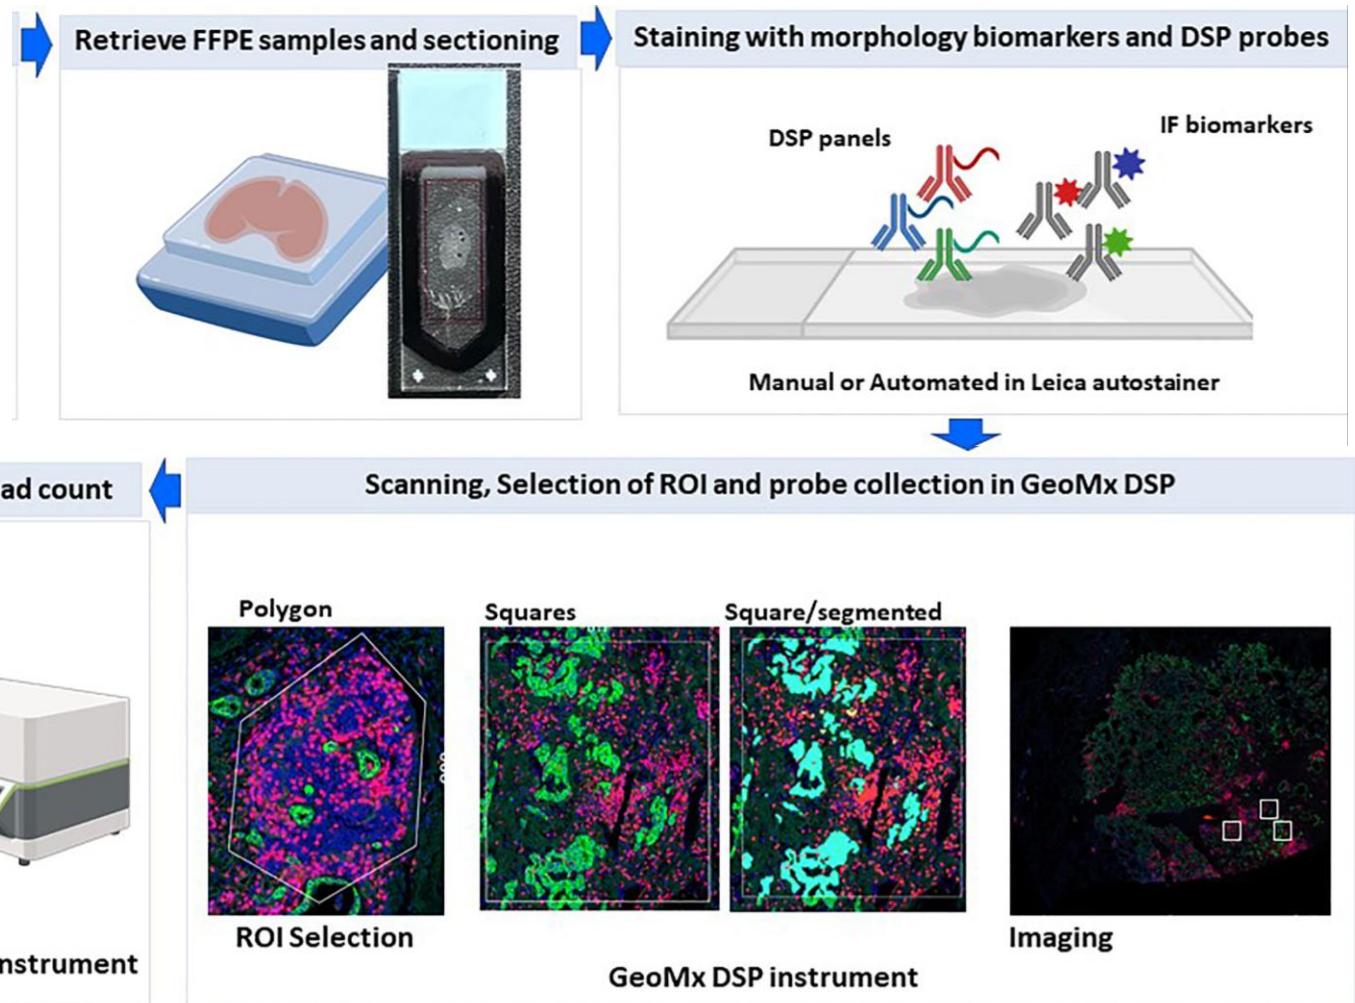

By signaling pathways – REACTOME/KEGG/GO, CellChat

By spatial localization

# SPATIAL ANALYSIS OF THE REMODELING LUNG

# REGION SELECTION

CD45 – yellow  
CD68 – red  
DNA – green  
PanCK - cyan

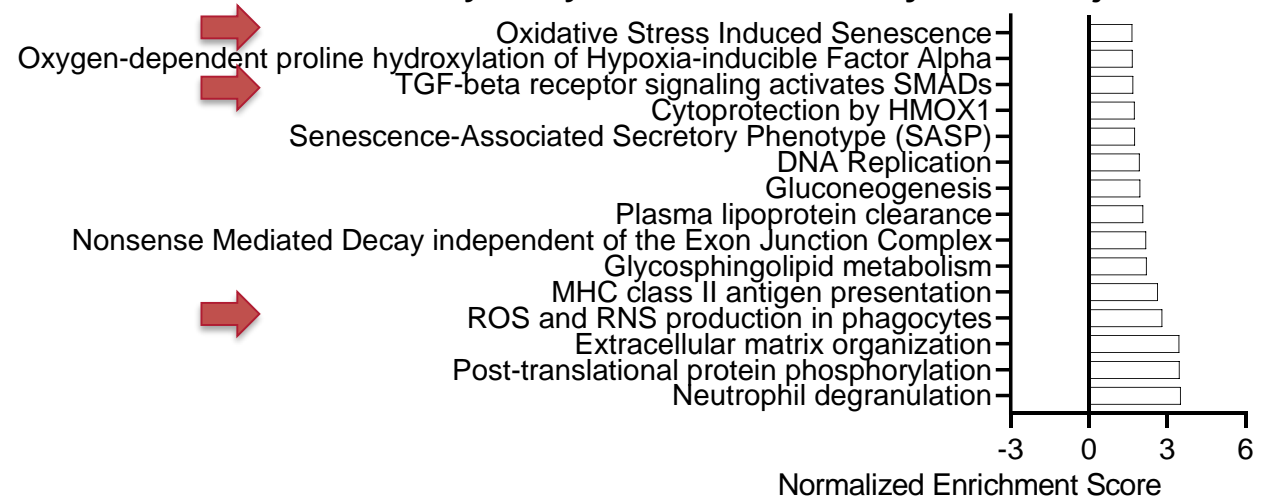

# SP-C INDUCED STRESS DRIVES ACTIVATION OF THE PERI-INJURED REGIONS

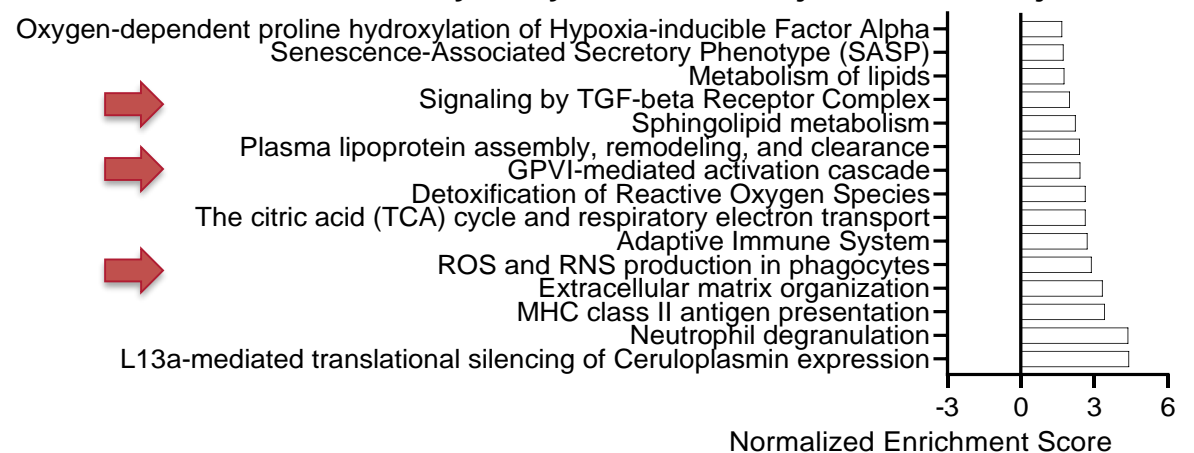

## REACTOME Pathway Analysis

← Healthy vs. Peri-Injured →

## REACTOME Pathway Analysis

← Injured vs. Peri-Injured →

Unpublished data

# REGIONAL CLUSTERING IN THE SP-C LUNG – PROFIBROTIC SIGNALING

## Degradation of the extracellular matrix

Unpublished data

# REGIONAL CLUSTERING IN THE SP-C LUNG – COMPLEMENT EXPRESSION

Unpublished data

# IN THE WORKS: COMPARATIVE ANALYSIS OF MACROPHAGE ACTIVATION IN OZONE EXPOSURE

- Rapid onset of injury
- Transient
- Long term impact depends on dose, frequency of exposure, **individual susceptibility**

Single exposure – 0.8 ppm; 3h; 72h post exposure

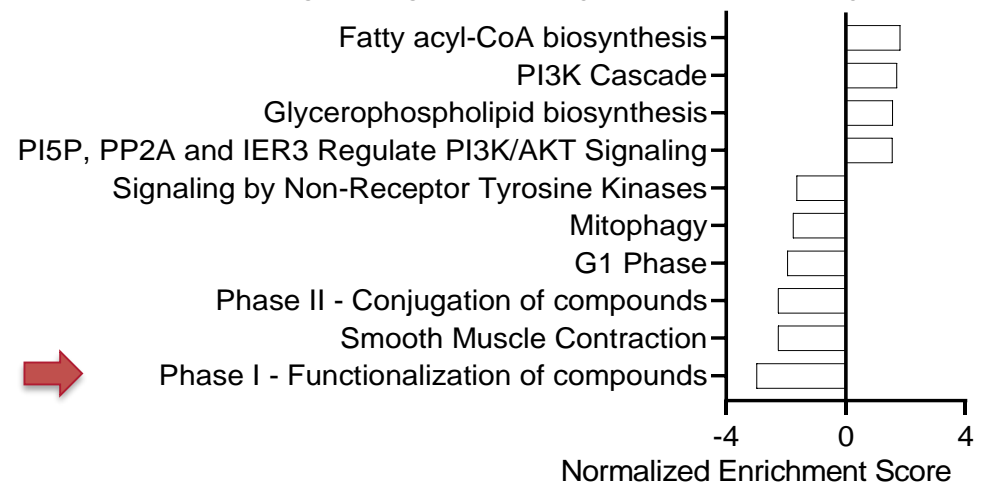

'Nguyen et al., 2021

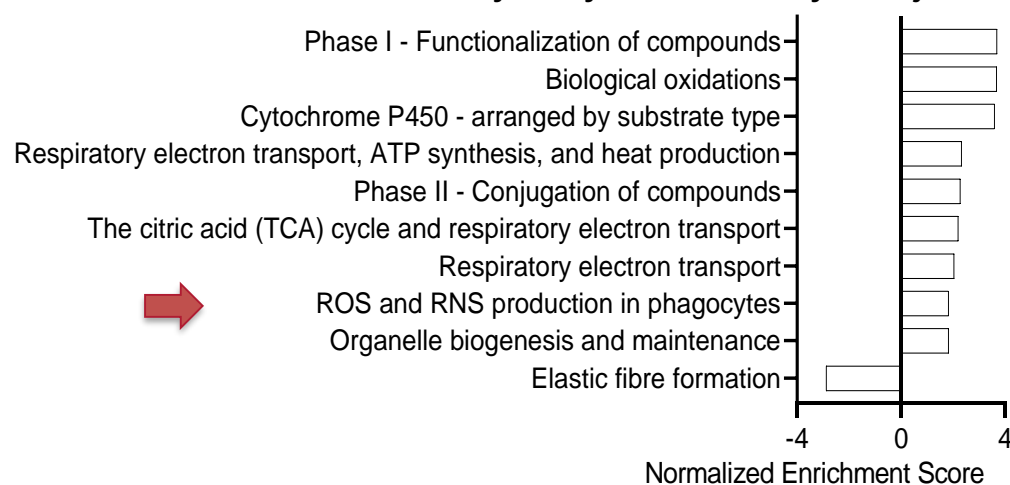

# OZONE DRIVES MULTIDIRECTIONAL MACROPHAGE ACTIVATION IN SP-C MUTANT MICE

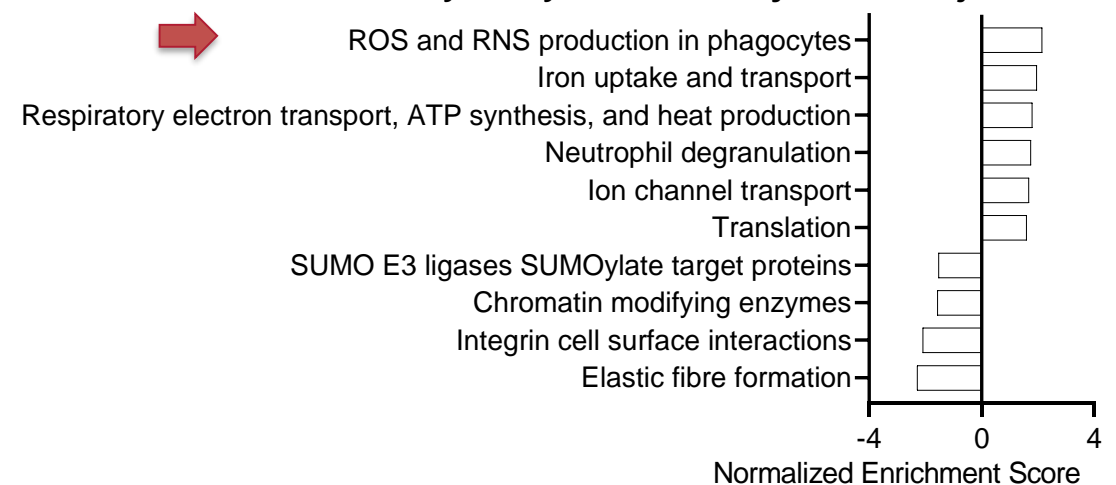

## REACTOME Pathway Analysis ← Injured vs. Peri-Injured →

## REACTOME Pathway Analysis ← Healthy vs. Injured →

## REACTOME Pathway Analysis ← Healthy vs. Peri-Injured →

Unpublished data

# TAKE HOME MESSAGE AND FUTURE DIRECTIONS

- SP-C<sup>I73T</sup> induced injury – shows multicellular inflammatory cell infiltrate
  - Spatial analysis of CD68<sup>+</sup> cells show “unidirectional” macrophage activation (peri-injured)
  - Comparative analysis with the air pollutant ozone, shows region-specific signatures in macrophages
- ❖ Use of predictive tools like CellChat/CellPhone to predict cell-cell communication
  - ❖ Integration of spatial analysis with single cell sequencing
  - ❖ Expansion of analysis to include O<sub>3</sub> exposure in the fibrotic lung
