*(Pre-Registration necessary — See Conference
Pre-Registration form enclosed in conference packet)*

1. Dermatotoxicology

Monday Morning, March 7, 1983

8:00 A.M. - Noon

Colosseum II & III

\$50.00* (including textbook)

This course will provide a survey of the science that deals with adverse skin effects and the substances that produce them. The second edition of the well-known text "Dermatotoxicology" will be used and copies will be provided to each attendee. The editors, Dr. Francis N. Marzulli (National Academy of Sciences) and Dr. Howard I. Maibach (University of California - San Francisco Medical Center), with assistance from contributing authors, will cover selected portions of the text. This is an excellent opportunity for individuals to learn from experts in the field and obtain a copy of the book for future reference for a registration fee that is less than the list price of the text.

**Special discount: \$35 for full-time, predoctoral students.*

2. Practical Statistics for the Toxicologist

Monday Morning, March 7, 1983

8:00 A.M. - Noon

Julius Room

\$30.00*

This course will provide a survey on basic statistical considerations used to design, analyze and interpret toxicological experiments. Emphasis will be given to presenting basic concepts and information that can be used by toxicologists to improve the quality of their work. The faculty members are experts who understand statistics and, equally important, know how to apply statistical methods to toxicological problems. All participants will receive a syllabus covering the material that is presented.

Philosophy of Statistics as Applied to Toxicology. Dr. Jerry B. Hook, *Michigan State University.*

Statistical Design of Toxicological Experiments. Dr. Daniel Krewski, *Environmental Health Center, Health and Welfare of Canada.*

Monday Afternoon, March 7, 1983

1:00 P.M. - 5:00 P.M.

Colosseum II and III

\$30.00*

It is increasingly apparent that infectious agents pose a serious complicating factor in the conduct and interpretation of toxicological studies. This course will include state-of-the-art information on the effects of infectious agents on toxicological studies. The material presented will aid participants in planning and conducting studies to minimize the complications of infectious agents. Moreover, the knowledge gained will assist in critically evaluating the results of studies that may have been complicated by the presence of infectious agents. The faculty for the course are scientists who are internationally recognized for their work in this important area.

4. Male Reproductive Tract Toxicology

Monday Afternoon, March 7, 1983

1:00 P.M. - 5:00 P.M.

Julius Room

\$30.00*

This course will present information on the physiology and biochemistry of the male reproductive tract and how normal function may be altered by toxic agents. The faculty are recognized experts in this highly specialized field. They will present background material and important concepts to familiarize non-experts with the field and enhance the knowledge of those who are working in this area.
